

Leteesha has always been a practical person and was inspired by her brother's choice to work in the building services sector. Her roles requires her to interpret drawings and specifications and assist in surveying and commissioning on site to support the Project Manager. She grew up in East London, and seeing how the Olympic Park has regenerated the area fuelled her desire to be part of similar projects. She believes that age-old stereotyping puts young girls off.

"The industry was never promoted at school and I think companies involved in construction should do more to promote the career paths available"

We are a specialist contractor of BEMS and Smoke Ventilation Systems. We work for London's major contractors who are at the forefront of the Industry. As a specialist, our clients come to us for expert knowledge and we help them to find ways of delivering compliance in the most cost effective and innovative way. I get most satisfaction when we are seen as part of the design team and introduced onto a project by our clients at the early pre-construction phases. We then have a real opportunity to be creative and offer value added benefits to the project.

"It gives me great satisfaction and pride to be involved in the construction of (and stand at the top of), some of London's most iconic buildings!"

Allies & Morrison are the architect for 4 Kingdom Street. Cecilia focused on the technical aspect of the building while it was in construction, co-ordinating the different disciplines using BIM (Building Information Modelling). 4 Kingdom Street was the first time they had used BIM to entirely co-ordinate all trades from design through to the construction.

"I am encouraged because I am surrounded by women in senior roles. Good role models will help to encourage more young people to work in the Industry."

ASSOCIATE,
ALLIES & MORRISON

LETEESHA FLORE
APPRENTICE PROJECT ENGINEER,
SCS GROUP

FAYE YOUNG
REGIONAL MANAGER,
SCS GROUP

KARINA WILLIAMS
SUSTAINABILITY MANAGER,
BRITISH LAND

4 Kingdom Street

HELEN NEWMAN
SENIOR ASSOCIATE SUSTAINABILITY,
TFT CONSULTING

Helen's role is to assist designers and developers to construct developments that have a lower environmental impact and improve building users' health and wellbeing. She is the Sustainability Champion on the project and BREEAM assessor. Her role provides support in implementing British Land's sustainability requirements to ensure the project achieves a BREEAM excellent rating.

Inspired by seeing how buildings rise from the ground, Karina has always been interested in a career in construction. Her role covers environmental improvements like reducing energy, carbon and waste on site, but also social aspects relating to how their developments impact people's lives.

"Construction is not just about the physical build, it's so much more. here's so many innovative ways of building, it's fascinating"

CHLOE SMITH
DOCUMENT CONTROLLER,
WATES CONSTRUCTION

"Construction is a unique environment to work in, there is also a sense of pride created when delivering a project and I love that I am part of the team that is building 4KS"

The construction industry has offered Chloe lots of room for development and progression in her career. She believes the industry should offer women competitive salaries and benefits surrounding maternity that are above the industry standard.

"Women in our industry have the opportunity to be creative thinkers and inspiring leaders, and I never have the same day twice. I am proud to have worked on some of Europe's largest regeneration projects and helped make them environmentally better places to work, live and enjoy."
